

ClipFlipz Fitting Guide and Sizes (www.clipflipz.com/ClipFlipz-Rectangular-Size-Guide.pdf)

Our easy to use fitting guide will help you to quickly select the most appropriate ClipFlipz model for your spectacles. First you need to print this guide, it can not be used on your computer screen. Set your print preferences to **no scaling** and print it at **100% actual size**, otherwise it will not provide an accurate guide to the size most suitable for your glasses.

Measure either of the blue lines below to verify the accuracy of your print out. Then place your spectacles face down over the images of each model. If your spectacles fit **WITHIN** the red box allowing for the horizontal crossbar to sit on top then that model is suitable for your glasses. If your spectacles exceed the red box, then you should try the next size up. There are 6 sizes of ClipFlipz to choose from, print both pages to see all 6 sizes. . The correct fit is the model that is just slightly larger than your spectacles, the temples may protrude a little but the lenses and frame should be entirely covered. Please see the example at the end of page 2.

130mm

6"
